the original complex consisted of world trade center 1, 2 and 4, along with the twin towers of 4 world trade center and 5 world trade center. the twin towers of 4 world trade center were built in 1972, and included a 78-story condominium building, known as 2 world trade center, which was completed in 1973. completed in 1974, 5 world trade center was the tallest building in the united states for about three years. another intention of the world trade center is to serve as a symbol of patriotism and internationalism. the center's dedication was held on september 11, 2001. the building also represents the coming together of people from different cultures, which creates a sense of global unity. the buildings have been celebrated in art, film, literature, music, and other forms of cultural expression. the port authority of new york and new jersey (panynj) oversees the world trade center, and has been the owner of the site since 1963. the port authority is a bi-state public entity responsible for the operation of the transportation, trade, and housing facilities of the port of new york and new jersey. the port authority also operates the george washington bridge, one of the world's busiest bridges, and has been the primary operator of the region's airports, including the airports at laguardia, kennedy, and newark. in 2004, the port authority acquired the new york convention center and the surrounding world financial center from empire state development for \$1.8 billion. residential occupants: the world trade center, when completed, would have housed about 25,000 people. the original plan for the complex included 20,000 residential units, but this was later reduced to 10,000. the buildings' owners, the port authority, planned to provide affordable housing for low-income new yorkers, as well as to make the towers available to businesses as a space for office tenants. though the towers were designed with enough space to allow for the construction of thousands of housing units, the fact that almost all of the space was already filled led to a shortage of affordable rental housing in the area. the owners eventually partnered with the united states department of housing and urban development to address the issue of affordable housing in lower manhattan. the first two residential buildings opened in 1973. in addition to the 20,000 rental units, the world trade center had about 1,000 units of cooperative and condominium ownership. in 1975, the first of the cooperative buildings, one..

by the 1960s, the port authority had begun to plan for the future of the site. the agency had initially planned to convert the world trade center into a parking garage, but eventually decided to build a new complex of office towers and retail space. the first new tower, 1 wtc (south tower), opened in 1973, and the second, 2 wtc, in 1974. both towers contained a transit concourse that was, in turn, connected to the path system. in the 1980s, another world trade center building (the former pan am building) was built across the street and connected to the world trade center by the path train. known as the north tower, it was across the street from the north tower of the world trade center. it was built in a similar style to the north tower, and included a restaurant and a limited-access observation deck. in addition, there were now two observatories (the north tower had one, the south tower had one, and the north tower had two). the north tower observation deck was closed in 1993 and rebuilt, and reopened in 2014. it offers an even better view of the city, as the north tower is now closer to the city's tallest buildings, the chrysler building, empire state building and world trade center.

a pair of twin towers, the world trade center (wtc) in new york city, are among the most recognizable landmarks in the united states. with a combined height of 1,776 feet (541 metres), they are the world's tallest twin buildings, as well as the fifth and sixth tallest buildings in the united states. located at the southeast corner of west street and vesey street, their spires can be seen from a distance. the two towers are referred to as one world trade center and two world trade center, and are the tallest man-made structures in the western hemisphere. the towers are owned and operated by the port authority of new york and new jersey. despite a worldwide search for a suitable location, no building in manhattan could fit the needs of the port authority of new york and new jersey, which wanted a high-rise office building with a clear line of sight to the new jersey side of the hudson river. 5ec8ef588b
