rcm aci builder bim diploma (revit + robot) 2018. youre thinking about buying a home, but youre unsure about the cost. although you are familiar with the cost of buying a home, you want to make sure that you have the financial information to make an informed decision. we will be there in the courtroom, the first day, helping to interpret the evidence, and to explain the building codes and regulations. but to win a case, our clients have to be able to prove that a problem exists, and that it is the builder, and not the homeowner, who is responsible. the flaws must be present when the residence was built or substantially altered. the builder must be alerted of the defect, and, to the extent allowed by the applicable building code, the defect must be remedied. because every builder will not conform to the uniform building code, it is important to understand that the uniform building code is designed to protect owners and occupants, not builders, and it has very specific requirements. for example, in texas, a defective foundation is a construction defect, and the builder is liable for the cost of repair. the texas legislature passed the residential construction liability act, commonly referred to as the texas "deceptive trade practices act", to protect homeowners from unscrupulous builders. under the act, a homeowner is entitled to all of the remedies available at law, including damages for mental anguish, and all costs of repair. unlike other software which only shows a few parameters at the bottom of the screen or a table of values, rcm aci-builder offers a complete report with all of the information needed to design the structure. to design with rcm aci builder, all the different types of structural sections, reinforcement, and their values can be entered and saved in each of the different sections. once the report is complete, it can be used to calculate the load bearing capacity, the buckling resistance, the shear strength, the tensile strength, the bending strength, the compressive strength, the flexural modulus, the springback, the material properties, and other structural parameters that are needed to design with rcm aci builder.
