Hi Jordyn, I am happy to see a review of Adobe Photoshop, so thank you for doing that. I have been doing photography for about 10 years and use the product yet I have never used Lightroom before. Your review and your summary of it were spot on and it seems to be reasonably priced. I'll be checking it out. I have had the pleasure of using the Adobe Products for over 30 yrs. PS is still the best of the best even today as the technology advances every day. Features and abilities of the latest versions are also better than in prior versions of the software.

In the past, I have never had much luck with third-party programs and upgrades unless they offer something original.

I used the more or less the same programs for my entire career and it has always ended up creating clutter on my hard drive that was hard to clean out. As a result, I am retired now and no longer support or use the Creative Suite programs.

I have used most of the photo editing software that the industry had before Photoshop, from proprietary to open-source. I also have used several other programs that were designed for specific purposes. The TrueNorth crowdsourced development initiative created by Adobe is both amazing and terrifying. While I don't know if it's that direct, if it is, it's pretty damn scary. I'm not alone with this article, but it's still worth the time to read it anyway. I had no idea what I was doing with my photos and was unable to edit them with a quality I was satisfied with. Once I got the editing basics down, I started using a program called Photoshop Elements, and it's such a good application for producing standard camera-type images that I've never looked back.

But be careful, if you use it, be sure to save a backup of your current work before applying Dark Room. The Dark Theme is found in the same place as the themes, or by navigating to Window > Themes, clicking on the Edit button, and clicking on the Dark theme. To find the file duplicating and masking feature, you will find it by pressing cmd-E (PC) or CMD-E (Mac), and the option to duplicate and mask is found right on top of the main panel. This happens with any image in Photoshop such as a photo, a logo, or an icon. Whether you paste it on a new layer, then cut it to its new location, or you copy it and paste it to another layer and cut the new image, it's the same basic process.
